Engineering interpretation

Summary: Prusa3D Buddy3D Black Gold PLA Glitter Black has a balanced mid-range engineering profile. It is above its material-family average by 5,5 points and above its manufacturer average by 6,2 points. Its strongest measured axis is Stiffness, while the weakest axis is Impact.

Data-driven review: Prusa3D Buddy3D Black Gold PLA Glitter Black is best understood as a balanced material for general functional prototypes. Compared with the current verified dataset, it ranks better than 88% overall, is above the material-family average by 5,5 points, and is above the manufacturer average by 6,2 points. Its strongest engineering signal is Stiffness, while Impact is the main limitation to consider before using it for demanding applications.

Strengths

- Layer adhesion: 39/100. Z-axis bonding is better than the material-family context.
- Consistency: 83/100. Repeatability is one of the stronger signals in this material profile.
- Tensile: 39/100. Tensile behavior is competitive against the material-family context.
- Stiffness: 99/100. Stiffness is a relative advantage in this comparison group.

Limitations

- Tensile: 39/100. Avoid using this as the primary choice for tensile-loaded parts.
- Impact: 18/100. Avoid high impact or shock-loaded components without additional validation.
- Layer adhesion: 39/100. Z-axis performance should be treated with caution.

Engineering trade-offs

- Good repeatability does not compensate for low tensile capability in load-bearing designs.
- Stiffness is useful for shape stability, but impact tolerance is a separate limitation.

Recommended applications

- Rigid brackets, fixtures and shape-stable prototypes
- Repeatable print jobs and production-style batches
- Cosmetic parts, concept models or low-load prototypes
- Avoid high impact components

Decision guidance

- Use this material for moderate requirements after checking the weakest axis.
- Review the listed alternatives if the application needs stronger overall performance.
- Avoid selecting it for impact-focused testing or shock-loaded designs.

Methodology and limitations

Results are comparative 3DPlceland measurements from home-built test equipment. Thermal is a nearby BlueDOT probe-indicated fixture temperature, not ASTM D648, ISO 75 or specimen temperature. Missing evidence remains n/a. Scores and test results are not recalculated by this publishing layer and do not replace certified manufacturer datasheets or accredited laboratory testing.
