Engineering profile

Recommended applications

- Repeatable print jobs and production-style batches
- Cosmetic parts, concept models or low-load prototypes
- Avoid high tensile load applications

Measured strengths

- Consistency: 86/100. Repeatability is one of the stronger signals in this material profile.
- Impact: 54/100. Impact behavior is competitive against the material-family context.

Limitations

Engineering trade-offs

- Tensile: 21/100. Avoid using this as the primary choice for tensile-loaded parts.
 - Layer adhesion: 17/100. Z-axis performance should be treated with caution.
- Good repeatability does not compensate for low tensile capability in load-bearing designs.
 - The report should be read as a suitability warning rather than a general-purpose recommendation.

Base-material printing guidance

Guidance	Minimum	Recommended	Maximum	Unit
Nozzle temperature	250	255	265	°C
Bed temperature	110	110	110	°C
Print speed	55	165	165	mm/s
Cooling	15	20	20	%

Guidance	Value	Unit
Cooling guidance	Low	
Drying temperature	75	°C
Drying time	6	hours
Enclosure	Required	
Printer / G-code reference	PrusaCoreOneL	
Slicer profile reference	Prusa Buddy3D ABS	

Print workflow checks

- Confirm nozzle temperature, bed temperature, speed, cooling and drying requirements from the manufacturer profile or spool label.
- Print a small validation part before committing to a long, costly or safety-relevant print.
- Orient the part so the governing load does not rely on an unverified or weak engineering axis.
- Engineering/high-temperature family: confirm enclosure, ventilation, warping control and material-specific drying requirements.
- Layer-adhesion evidence is weak; avoid critical Z-axis loading without additional validation.

Decision guidance

- Use this material mainly for low-load, visual or experimental parts.
- Do not choose it as a tensile-strength benchmark material.

Stronger same-family alternatives

MaterialID	Material	Manufacturer	Overall	Tensile	Impact
Confirm exact settings against the manufacturer profile, spool label and actual printer/material combination. Results do not replace application-specific validation.
